Bouncy Cat Instruction Manual

How to Play:

- The game starts at the main menu. From here the player can choose to play, change the game difficulty (not implemented yet), or see the leaderboard (not implemented yet).
- In play mode, the player controls a hand with their mouse. The hand is used to bounce the cats away from the water below.
- There will be black blocks that appear that will serve as obstacles. The cat will also bounce away from these, making gameplay more difficult.
- There will also be blocks with a treat inside (not implemented yet), which the cat wants, so the player should bounce the cat toward these treats. Hitting a treat will increase the player's score.
- To pause the game, the player can press the spacebar, which will take them to a pause page. They can then continue playing or go back to the main menu.
